

## Recessed Drinking Fountain

Product Code: DFRN

If you've always wanted a drinking fountain in your school but just don't have enough space, we have the perfect solution: a recessed drinking fountain. This drinking fountain is designed to be recessed within a wall cavity, which not only saves space and shelters the unit from damage, but also has the added benefit of preventing your pupils from bumping into it as they rush down the corridor.

This recessed drinking fountain should be mounted within the cavity using the supplied fixing brackets. The unit also comes with a rubber drinking faucet, a press-operated control button and a 32mm waste fitting.

To ensure the proper functioning and longevity of this unit, a Y-strainer or filter must be installed as part of the water supply system. The Y-strainer / filter is essential for protecting the internal components and maintaining the correct flow characteristics of the tap. Failure to install a Y-strainer or filter will result in the warranty being void

### Delivery

From stock usually 2 to 3 working days

### Tech specs
